|     | (c)        | Discuss the error r                                                                                                                                                                                                                                                          | ate and validation                       | error in the kNN algori                                                  | thm.             | 07            |

**Q.4** (a) Explain sum of squares due to error in multiple linear regression with 03 example. (b) Describe the concept of single link and complete link in the context of 04 hierarchical clustering. Explain how the Market Basket Analysis uses the concepts of association **07** (c) analysis. OR (a) Explain dependent variable and an independent variable in a linear **Q.4** 03 equation with example. (b) Describe the main difference in the approach of k-means and k-medoids 04 algorithms with a neat diagram.

Explain the Apriori algorithm for association rule learning with an example.

## **GUJARAT TECHNOLOGICAL UNIVERSITY**

**BE - SEMESTER-VII (NEW) EXAMINATION - SUMMER 2022** 

| Subj |                      | ode:3170724 Date:14/0                                                                                                                                                                                                                                                      | 6/2022         |
|------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| Time |                      | ame:Machine Learning<br>30 PM TO 05:00 PM Total Mar                                                                                                                                                                                                                        | rks: 70        |
|      | 1. A<br>2. N<br>3. F | Attempt all questions.  Make suitable assumptions wherever necessary.  Figures to the right indicate full marks.  Simple and non-programmable scientific calculators are allowed.                                                                                          |                |
| Q.1  | (a)<br>(b)<br>(c)    | Define Machine learning? Briefly explain the types of learning.  Explain the concept of penalty and reward in reinforcement. Learning.  What do you mean by a well-posed learning problem? Explain important features that are required to well-define a learning problem. | 03<br>04<br>07 |
| Q.2  | (a)<br>(b)           | How can we take care of outliers in data?<br>Explain Key elements of Machine Learning. Explain various function approximation methods.                                                                                                                                     | 03<br>04       |
|      | (c)                  | Draw and explain the flow diagram of machine learning procedure.  OR                                                                                                                                                                                                       | 07             |
|      | (c)                  | List and explain the types of machine learning in brief.                                                                                                                                                                                                                   | 07             |
| Q.3  | (a)<br>(b)<br>(c)    | What is likelihood probability? Give an example. What is data sampling? Explain data sampling methods? What are the Techniques Provided in Data Preprocessing? Explain in brief.                                                                                           |                |
| Q.3  | (a)<br>(b)<br>(c)    | OR What is difference between Machine Learning and Deep Learning. Differentiate PCA and LDA. Explain the process of Supervised Learning Model.                                                                                                                             |                |
| Q.4  | (a)<br>(b)<br>(c)    | Define issues in machine Learning. Write a note on KNN. List the methods for Model evaluation. Explain each. How we can improve the performance of model.                                                                                                                  | 03<br>04<br>07 |
| Q.4  | (a)<br>(b)           | OR  Explain the training of Predictive Model.  List Classification algorithms. Explain Decision Tree as classification method.                                                                                                                                             | 03<br>04       |
|      | (c)                  | What is Clustering? Explain K-mean clustering algorithm.                                                                                                                                                                                                                   | 07             |
| Q.5  | (a)<br>(b)<br>(c)    | Explain the need of feature engineering in ML. Explain Binomial Distribution with an example. Explain Bayes' theorem in details.                                                                                                                                           | 03<br>04<br>07 |
| Q.5  | (a)                  | OR Define: a. Supervised Learning b. Classification c. Regression                                                                                                                                                                                                          | 03             |
|      | (b)                  | Write a short note on feed forward neural network.  Explain Monte Carlo Approximation.                                                                                                                                                                                     | 04<br>07       |
